

## System Requirements

### Minimum system requirements:

2.5GHz or higher CPU

2GB RAM (the larger the model, the greater the RAM required)

Windows 7 or newer 32bit / 64bit

### Recommended system requirements:

Intel Core i5/i7 or AMD Equivalent

8GB RAM or higher

Graphics Card that supports OpenGL

Windows 7 or newer 32bit / 64bit

Increased RAM or a higher CPU speed will improve the run time of a STEPS model. At present, multiple CPU systems will not improve the run-time of a model, though we are actively working to develop parallelisation of STEPS. However, currently multiple CPUs will allow more systems resources to be provided to the STEPS software which will improve the run time of a model.
